

EMMANUEL BENSON

Software Developer | Full-Stack Developer | Python Developer
Edinburgh, UK • emmaben2018@gmail.com • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

PROFESSIONAL SUMMARY

Computer Science graduate (BSc Hons, Edinburgh Napier University) with 4+ years of hands-on software development experience across freelance, internship, and academic settings. Proficient in building full-stack web applications with React, Next.js, Flask, and .NET (C#), and in developing machine learning solutions in Python using Scikit-learn and transformer models. Strong foundation in REST APIs, relational and NoSQL databases, version control, and Agile workflows. Seeking a Software Developer, Python Developer, Full-Stack, or AI/ML Developer role.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, C#, SQL, HTML5, CSS3

Frontend: React.js, Next.js, Vue.js, Tailwind CSS, Bootstrap, GSAP, Responsive Design

Backend: Flask, Node.js, .NET (Entity Framework Core, Dapper), REST API Design

Machine Learning / AI: Scikit-learn, Transformers (BERT, RoBERTa), SHAP, Model Evaluation

Databases & Tools: SQL Server, PostgreSQL, MySQL, MongoDB, Firebase, Git, GitHub, Docker, Vercel, Agile/Scrum, Figma

PROFESSIONAL EXPERIENCE

Frontend Developer (Freelance) | Upwork — Remote, UK | *Mar 2022 – Present*

- Delivered responsive, scalable web applications for international clients using HTML5, CSS3, JavaScript, React, and Vue.js.
- Built pixel-perfect, cross-browser interfaces from Figma and Adobe XD designs, applying UI/UX best practices to improve user engagement.
- Optimised performance through lazy loading and efficient asset management, and integrated third-party APIs to extend functionality.
- Managed version control with Git/GitHub and provided post-deployment support, maintenance, and bug fixes.

IT Assistant (Internship) | W Hotel Edinburgh — Edinburgh, UK | *Jun 2024 – Sep 2024*

- Resolved daily hardware and software issues for staff and guests in a fast-paced 5-star environment.
- Supported core hotel systems (PMS, POS) and maintained IT infrastructure including servers, workstations, secure Wi-Fi, and event AV equipment.
- Monitored cybersecurity risks and supported implementation of data protection protocols.

Frontend Developer (Freelance / Contract) | Self-employed — Lagos, Nigeria | *Jan 2020 – Feb 2022*

- Delivered web solutions for small businesses and startups while studying full-time.
- Developed responsive websites with HTML, CSS, JavaScript, and modern frameworks, translating Figma/Adobe XD designs into functional applications.
- Optimised sites for speed and SEO, improving load times and search visibility; gathered requirements directly from clients.

TECHNICAL PROJECTS

Fake News Detection System — Honours Dissertation • *Python, Scikit-learn, Hugging Face Transformers (BERT, RoBERTa), Pandas*

- Conducted a comparative study of classical models (Logistic Regression, SVM) and transformer models (BERT, RoBERTa) for fake news detection across the LIAR and ISOT datasets (45,000+ articles).
- Built a reproducible Python pipeline for data cleaning, TF-IDF feature extraction, model training, and evaluation using accuracy, precision, recall, and F1 metrics.

- Designed a cross-domain evaluation that exposed sharp generalisation failure: models reaching near-perfect in-domain F1 dropped close to zero on a different dataset, evidencing real-world robustness limits.
- Fine-tuned transformer models with the Hugging Face Trainer API and presented findings through comparative metric tables and visualisations.

DE-Store — Distributed Store Management System — University Project · *Python, Flask, SQLAlchemy, REST APIs, Bootstrap, SOA*

- Built a microservice-style retail platform using Service-Oriented Architecture, with independent price, inventory, finance, and reporting services exposed through REST APIs.
- Modelled relational data with SQLAlchemy and structured the application as loosely coupled Flask blueprints for maintainability and scalability.
- Integrated an external finance-approval API to process applications and return approval decisions in real time.
- Implemented low-stock alerts, sales performance reporting, and a responsive Bootstrap dashboard frontend consuming the service APIs.

CVKit — CV & Cover Letter Builder — Personal Project · *React, Vite, Vercel Serverless Functions, REST APIs*

- Designed and shipped a full-stack web app with a React (Vite) frontend and a Vercel serverless backend that proxies a third-party AI API, keeping the secret key server-side.
- Implemented per-IP rate limiting on the serverless function to control API usage and protect against abuse.
- Built in-browser parsing of uploaded PDF, DOCX, and TXT files, plus an ATS keyword checker and multiple export templates.
- Applied SEO best practices (semantic HTML, structured data, sitemap) and a GDPR-compliant cookie consent flow.

Search & Rescue Multi-Agent Simulation — University Project · *JavaScript (OOP), Leaflet.js, OpenStreetMap*

- Developed a real-time multi-agent simulation with autonomous searcher and drone agents built using object-oriented class design and inheritance.
- Implemented distinct agent behaviours, including drone sweep patterns, proximity-based casualty detection, and inter-agent location broadcasting.
- Visualised agents and movement on an interactive Leaflet map over real-world map tiles, with live status logging and simulation controls.
- Built adjustable simulation parameters (speed, detection radius, step size) and start/pause/reset controls for testing different scenarios.

iPhone 15 Pro Max Website Clone — Personal Project · *React, Tailwind CSS, GSAP*

- Built a high-fidelity, Apple-inspired product website with React and Tailwind CSS, focused on modern UI/UX and visual polish.
- Engineered advanced scroll-driven animations and interactive transitions using GSAP to enhance user engagement.
- Developed a fully responsive interface optimised for performance across desktop and mobile breakpoints.
- Structured the project into reusable React components for maintainability and clean separation of concerns.

EDUCATION

BSc (Hons) Computer Science — Edinburgh Napier University, Scotland, UK *Sept 2022 – July 2026*

National Diploma, Computer Science — Yaba College of Technology, Lagos, Nigeria *Sept 2020 – Apr 2022*
